EDUCATION

University of Central Florida

Graduating: May 2027

B.S. in Computer Science, College of Engineering and Computer Science

Orlando, FL

- GPA: **4.00 (20/20)** — **Core Concepts:** Data Structures, Algorithms, Object-Oriented Programming, System Design

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Typescript/JavaScript, Java, SQL, PHP, HTML/CSS

Frameworks & Libraries: React, Next.js, Django, Flask, Tailwind CSS, Bootstrap, tRPC, PyTorch, pandas, NumPy

Tools & Technologies: Git, Docker, CI/CD, REST APIs, API Integrations, OpenAI API, Gemini, Google ADK/A2A, Prompt Engineering, AI Agents, Workflow Automation, Monitoring, Claude Code, GitHub Copilot

Systems & Platforms: macOS, Windows, GitHub, Microsoft 365

Coursework: CS50x (Harvard), CodePath TIP102 (Technical Interview Prep), AI4ALL Ignite Program

Spoken Languages: German (Native), English (Fluent/C2)

EXPERIENCE

Software Engineer & Hackathon Organizer

Jan. 2026 – Present

Knight Hacks, University of Central Florida

Orlando, FL

- Organize **Knight Hacks**, a **1000+** attendee hackathon, coordinating sponsors, logistics, and volunteer teams to deliver workshops, judging, and event operations.
- Develop production-grade features in the **Knight Hacks monorepo** using **Next.js**, **React**, **TypeScript**, and **tRPC**, powering internal tools for a **1000+** user community including the website, application forms, and alumni platform.
- Collaborate with student engineers through **GitHub issues**, **pull requests**, and **code reviews**, along with **CI/CD workflows**, to **build, test, and deploy full-stack features**, focusing on reliability, maintainability, and performance in production environments.
- Documented workflows and implementation details to improve maintainability and team collaboration

Software Engineering Research Intern

June 2025 – Sept. 2025

APPLeSEEd Lab, University of Central Florida

Orlando, FL

- Fine-tuned **CodeBERT** on **10,000+** Linux kernel commits to build a commit risk classifier that achieved **F1 = 0.69** on unseen test data, **demonstrating feasibility of AI-assisted commit analysis** for software engineering.
- Labeled the dataset by linking **git** commits to public **CVE** records, enabling supervised training for security-risk classification.

IT Specialist

Oct. 2024 – Dec. 2024

Mafcom GmbH

Bavaria, Germany

- **Supported 100+ employees across 10+ client companies** by deploying and maintaining networks, routers, and on-site servers to improve stability and uptime.
- Reduced onboarding time by **40%** by automating device setup and migrations using preconfigured **Windows** installs, ensuring consistent and secure configurations.
- Resolved hardware/OS/network issues end-to-end and maintained secure system access to minimize staff downtime.

Software Development Intern

Aug. 2020

INSCOPUS GmbH

Munich, Germany

- **Centralized product documentation for 25+ employees** by building an internal web platform in **HTML**, **CSS**, **JavaScript**, **PHP** and adding an upload pipeline that automatically integrated and published updates from the website into live docs.
- Increased documentation **update efficiency by 60%** by replacing manual uploads with automated integration; delivered a **working MVP in 2 weeks**, enabling faster onboarding and team-wide adoption.

PROJECTS

CrisisLens | *TypeScript, React, Next.js, Tailwind, Databricks, Three.js, Pandas, NumPy, PyTorch*

Feb. 2026

- Won **1st place out of 234 teams** in the **Databricks Geo-Insight Challenge** at **Georgia Tech's** Hacklytics 2026 by building an AI-assisted humanitarian intelligence platform for crisis prioritization.
- Engineered a full-stack **crisis intelligence platform** with **Next.js**, **React**, **TypeScript**, and **Three.js**, enabling analysts to explore country-level humanitarian risk and funding gaps on an interactive **3D globe**.
- Implemented an analytics pipeline using **Databricks SQL Warehouse** and **Genie** to translate natural-language analyst questions into SQL insights, with **PyTorch**-based models for cross-country impact simulation.

slAIdE | *Python, Google ADK (A2A), Gemini 2.5 Flash, Next.js/React, Tailwind, LaTeX*

Oct. 2025

- Built a backend-driven **multi-agent** system that turns any paragraph or story into either a full **HTML5** slide deck or a **LaTeX**-compiled PDF from a single prompt, enabling students and professionals to produce polished deliverables with one click.
- Enabled **Agent-to-Agent** communication via **Google ADK (A2A)** with a **Host Router** and a sequential, multi-stage agent process powered by **Gemini 2.5 Flash**; added **strict output validation**, **end-to-end health checks**, and **timeout+retry** guardrails for reliable runs.

FocusForge | *JavaScript, HTML/CSS, Chrome APIs, Gemini, Figma*

Sept. 2025

- Built a Chrome extension for focus sessions that turns each session into clear insights, helping users track time, spot interruptions, and improve routines.
- Implemented session tracking with background scripts, notifications, and the **Chrome Storage API** for multi-tab logging, and integrated the **Gemini API** to deliver personalized productivity feedback from user reflections.
- Delivered an MVP in **12 hours** with a **4-person team**, featuring polished Figma-based UI and consistent theming.

HireTune AI | *Django, React, OpenAI, TypeScript, Docker, Figma*

April 5–6, 2025

- Built **HireTune AI** using **React + Django** and the **OpenAI API** to help applicants tailor resumes to each job opening and submit stronger applications faster by generating ATS-aligned drafts in **under 10 seconds**.
- Delivered live AI edits and 1-click PDF export to cut manual reformatting by combining AI-driven content suggestions with a **LaTeX** pipeline for consistent, template-based PDFs.
- Added Discord OAuth and a job tracker so users can manage tailored versions per role, and shipped a production-ready MVP in **36 hours** with a **4-person team**, containerized with **Docker** for fast demo and deployment.
